

Utah Health Places Index (HPI) Indicators: The Utah HPI score is a composite measure of 20 indicators that are key drivers of health and life expectancy. The indicators fall into 8 domains (economic, education, clean environment, healthcare access, housing, neighborhood, social, and transportation).

Decision Support Layer (DSL) Indicators: The DSL includes additional indicators that are not part of the Utah HPI composite score but can help communities have a more comprehensive picture of community conditions that impact health.
